

Fatma Nur Depboylu is a Postdoc Researcher in Additive Manufacturing at the University of Southern Denmark, Department of Mechanical and Electrical Engineering (DME). She completed the MSc Biomedical Engineering program at Newcastle University, UK. Her master's thesis was on 3D printing porous polymer structures for tissue engineering. She continued PhD research on additive manufacturing of metal implants and their coating with bioceramics composites for orthopedic applications as a PhD scholar at Hacettepe University Department of Bioengineering, Turkey. Specifically, she has been working on the metal additive manufacturing, especially laser powder bed fusion technology, lattice structures and coating techniques for orthopedic titanium bone implants.
